

Project Experience

Energy – Transmission towers

Project information

location	Europe
client	Several
project	Maintenance and new construction
date of project	2003 - 2013
climatic conditions	March to November
substrate	Galva and old coating
surf. Preparation	St 3
system	MCU-Aluprime MCU-Miotopcoat

During the last years many renovation and new construction projects have been coated with MCU-Coatings' systems. Projects in Belgium, South Africa, USA and recently a very big new build project in Slovenia for ELES were successfully finished.

Long term testing has proven MCU-Coatings' superiority compared to standard coatings. Its capability to go direct over old (sometimes flexible) coatings, to be used on Galva, to tolerate cold and humid climate conditions and the simplicity of system (1 component and only 2 layers) made many satisfied owners and contractors.
